cation-transporting ATPase (EC 3.6.1.-) pacL-2 - Synechocystis sp. (strain PCC 6803)
%;Alternate names: protein s111076
C:Species: Synechocystis sp.
A;Variety: PCC 6803
C:Date: 25-Apr-1997 #sequence_revision 25-Apr-1997 #text_change 21-Aug-1998
C;Accession: S77454

TISSUE SPECIFICITY: CELLS OF THE TEXMPHOCYTE LINEAGE. FOUND I
BOTH CORTICAL AND MEDULARY CELLS OF THE THYMUS.

DEVELOPMENTAL STAGE: HIGH LEVELS ARE INDUCED WITHIN 4-8 HOURS
T-CELL ACTIVATION IN SPLEEN AND THYMUS.

SIMILARITY: MEMBER OF THE IAP FAMILY.

SIMILARITY: CONTAINS 3 BIR DOMAINS (BACULOVIRAL INHIBITION OF
ADOPTOSIS PROTEIN REPEAT).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SIMILARITY: CONTAINS A C3HC4-CLASS ZINC FINGER.

                                                                                                                                                                                                                                                                                                                             "Sucrose synthase of Arabidopsis: genomic cloning and sequence characterization.";
PLANT MOL. BIOL. 18:131-134(1992).
-I- FUNCTION: SUCROSE-CLEAVING ENZYME THAT PROVIDES UDP-GLUCOSE AND FRICTOSE FOR VARIOUS METABOLIC PATHWAYS.
-I- CATALYTIC ACTIVITY: UDP-GLUCOSE + D-FRUCTOSE - UDP + SUCROSE.
-I- INDUCTION: BY ANAEROBIC STRESS.
-I- SIMILARITY: TO OTHER PLANTS SUCROSE SYNTHASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-APR-1993 (REL. 25, CREATED)

"The cytoplasmic peptidoglycan precursor of vancomycin-resistant enterococcus faecalis terminates in lactate.";

J. BACTERIOL. 174:5982-5984(1992).

-!- FUNCTION: REQUIRED FOR HIGH-LEVEL RESISTANCE TO GLYCOPEPTIDES ANTIBIOTICS. CATALYSES THE REDUCTION OF 2-KETO ACIDS TO 2-D-HYDROXY ACIDS THAT GIVE RISE TO PEPTIDOGLYCAN PRECURSORS THAT TERMINATE IN THE DEPSIPEPTIDE D-ALANINE-1-LACTATE RATHER THAN THE DIPEPTIDE D-ALANINE THUS PREVENTING VANCOMYCIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        "Molecular basis for vancomycin resistance in Enteroc BM4147: biosynthesis of a depsipeptide peptidoglycan vancomycin resistance proteins VanH and VanA."; BIOCHEMISTRY 30:10408-10415(1991).

MUTINE interleukin 2 receptor beta chain: dysregulated gene
expression in lymphoma line EL-4 caused by a promoter insertion.";

PROC. NATL. ACAD. SCI. U.S.A. 87:1806-1810(1990).

-I- FUNCTION: RECEPTOR FOR INTERLEUKIN-2. THIS BETA SUBUNIT IS
INVOLVED IN RECEPTOR MEDIATED ENDOCYTOSIS AND TRANSDUCES THE
MITOGENIC SIGNALS OF IL-2.

-I- SUBUNIT: NON COVALENT DIMER OF AN ALPHA AND A BETA CHAINS. IL-2R
EXIST IN 3 DIFFERENT FORMS: A HIGH AFFINITY DIMER, AN INTERMEDIATE
AFFINITY MONOMER (BETA CHAIN), AND A LOW AFFINITY MONOMER (ALPHA
CHAIN). THE HIGH AND INTERMEDIATE AFFINITY FORMS ALSO ASSOCIATE
WITH A GAMMA CHAIN.
                                                                                                                                                                                                                                                                                                                                 CHAIN
DOMAIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the European Bioinformatics Institute.
